ICPSR Codebook for Restricted-Use Data

Terms of Use

ICPSR Processing Notes for #38421

Combined Generations Wave 1 and TransPop surveys, United States, 2016-2018

DS2: Restricted-Use Data

1. **Restricted-Use:** This data may not be used for any purpose other than statistical reporting and analysis. Use of these data to learn the identity of any person or establishment is strictly prohibited. To protect respondent privacy, this data collection is restricted from general dissemination. To obtain this file, researchers must agree to the terms and conditions of a Restricted Data Use Agreement in accordance with existing ICPSR servicing policies.

2. **Confidentiality/Disclosure Risk:** In order to protect respondent anonymity and prevent disclosure risk, ICPSR completed the following:

   1. The following string variables are masked in the data: **Q21**, **Q63_T_VERB**, **Q81_T_VERB**, **Q83_T_VERB**, **LGB_Q20_T_VERB**, and **LGB_Q39_T_VERB**.
   2. Variable **Q38** was top-coded at values over 40 years.

3. **Recoded Values:**

   1. Due to SPSS limitations, ICPSR recoded alphanumeric values in the original Stata data to numeric values. The original alphanumeric value is included in the numeric value's label (e.g., "(.a) Planned missing").
   2. The variables **Q94**, **Q95**, and **Q96** included the alphanumeric value .c "None" and numeric value 0 "None" in the original Stata data. Alphanumeric values .c "None" were recoded to be combined with values 0 "None".
   3. The variable **Q107** included the alphanumeric value .b "Does not apply to me" and numeric value 5 "Does not apply to me" in the original Stata data. Alphanumeric values .b "Does not apply to me" were recoded to be combined with values 5 "Does not apply to me".

4. **Discrepancies:**

   1. The Crosswalk documentation only includes variables corresponding to items from the original TransPop2 and Generations Baseline surveys. Variable descriptions are also truncated in the Crosswalk documentation. Users are encouraged to review the P.I. Codebook and questionnaires for a complete list of variables and full question text.
   2. Several variables and values contain duplicated and/or truncated labels. Users will also notice several discrepancies between the data and the study documentation, such as variables and values in the data that may not be fully or accurately documented in all study documentation, minor differences in variable names, etc. Users are encouraged to thoroughly review all study documentation for additional information.
   3. There is an outlier of value 99 in the variable **Q64**. The P.I. indicated this should be changed to missing.
   4. The binary variables **ACE_EMO** through **ACE_INC_I** in the data file are unlabeled. The P.I. confirmed value 0 should be labeled "No, event never occurred" and value 1 should be labeled "Yes, event occurred at least once".
   5. The order of value labels in the variables **LGB_Q39_1** through **LGB_Q39_12** does not match the order of response options documented the corresponding survey item in the Generations questionnaire. The P.I. confirmed that the data, P.I. Codebook, and Crosswalk documentation are correctly labeled and the questionnaire is ordered differently.

5. **Related Data Collections:**

   1. The complete Generations study data (baseline, wave 2, and wave 3 survey data) can be found under ICPSR 37166, [Generations: A Study of the Life and Health of LGB People in a Changing Society, United States, 2016-2019](#).
   2. The complete TransPop study data (transgender and cisgender survey data) can be found under ICPSR 37938, [TransPop, United States, 2016-2018](#).

6. **Additional Information:**

   1. For additional information on the Generations study, please visit the [Generations](#) study website.

2. For additional information on the TransPop study, please visit the TransPop study website.

ICPSR 38421

Combined Generations Wave 1 and TransPop surveys, United States, 2016-2018

Variable Description

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
